Mechanical R&D | Soft Robotics | Computational Design
(714) 227-4396 • anpham@wpi.edu • Worcester, MA • aolabs.io • linkedin.com/in/alanpham97

Mechanical engineering Ph.D. candidate developing inverse computational mechanism design for soft robotic surfaces that form waves, overhangs, domes, and other 3D geometries. Work spans Sarrus/PneuNet cell assemblies, lattice-topology selection, pneumatic routing, and simulation-guided physical prototyping.

Research Focus

Soft robotics; morphing surfaces; modular pneumatics; inverse computational mechanism design; wave/overhang geometry; compliant mechanisms; linkage kinematics; airflow routing; constraint-based design.

Education

Doctor of Philosophy, Mechanical Engineering

Worcester Polytechnic Institute, Worcester, MA

Expected 2027
Advisors: Dr. Pratap Rao and Dr. Cagdas Onal

Master of Science, Mechanical Engineering

California State University, Long Beach, Long Beach, CA

2022
Advisor: Dr. Allen Teagle-Hernandez

Bachelor of Science, Mechanical Engineering

California State University, Maritime Academy, Vallejo, CA

2019
Advisor: Dr. Tomas Oppenheim

Awards

NSF NRT Future of Robots in the Workplace – Research and Development (FORW-RD) Fellowship 2024
WPI Intercollegiate Soft Robotics Competition – 1st Place 2024

Research Experience

Worcester Polytechnic Institute, Worcester, MA

Graduate Researcher – NanoEnergy Lab and Soft Robotics Lab

Aug 2023 – Present
Advisors: Dr. Pratap Rao and Dr. Cagdas Onal

- Built monolithically printed Sarrus/PneuNet cell assemblies that form single/double domes, bilayer overhangs, traveling waves, and object-transport surfaces.
- Reconfigured the same cell family into planar and cylindrical topologies for continuum bending/grasping, peristaltic crawling, and self-rolling locomotion.
- Created Wavevis, an AI-assisted computational-design environment for target shapes, lattice topologies, connector constraints, equal/collinear opposite-pair displacement, variable pair angles, and output metrics for mechanism selection and CAD decisions.
- Validating simulated linkage geometry with physical prototypes for connector clearance, leg displacement, topology configuration, cell-array kinematics, and pneumatic morphing-cell integration.
- Developing FluxCell, a pneumatic-mechanical cell architecture for shared inlet pressure, self-sealing snap-fit inter-cell air connections, and magnet/electropermanent-magnet valve concepts for individual PneuNet airflow.

NASA L' SPACE (NPWEE), Tempe, AZ

Soft Robotics Graduate Researcher – Project SELENE

Aug 2025 – Present

- Contributed to Project SELENE, a student exploration-robotics effort developing soft robotic hardware for remote and extreme environments.
- Developed a modular cable-driven soft robotic arm concept for terrain navigation and regolith sample collection in hard-to-reach exploration settings.
- Refined the "Spirobs" arm by pairing triple-cable actuation with an elastic braided-steel backbone for multidirectional bending, mechanical compliance, dust-resistant operation, and reduced maintenance.
- Led CAD updates, 3D-printing decisions, assembly strategy, and structured test/evaluation planning while guiding undergraduate teammates and coordinating with NASA subject matter experts.

Sandia National Laboratories, Albuquerque, NM

Graduate Research Intern – Nonlinear Mechanics and Dynamics (NOMAD) Research Institute

June 2025 – Aug 2025

- Co-developed NOMAD finite-element sweeps for an electromechanical ratcheting mechanism with intermittent contact, friction, springs, and pawl-gear interactions.

- Built comparable analytical, MATLAB multibody, and finite-element submodels for pin-spring-pawl, pin-pawl, and pawl-gear interactions under haversine shock and sinusoidal vibration.
- Ran structured sweeps across momentum-balance iterations (1–100), mesh density, and processor count (50–250%) to separate physical mechanism response from solver and modeling sensitivity.
- Identified sensitivity regimes in which pin-spring-pawl models converged while pin-pawl and pawl-gear cases showed contact/friction divergence, mesh-related lock-up, and environment-dependent sensitivity.
- Presented final results showing submodel-scale simulation sensitivity, informing mesh, contact/friction, iteration, and compute-resource choices before full assembly-level ratcheting models.

Worcester Polytechnic Institute, Worcester, MA

Aug 2023 – Present

NSF NRT FORW-RD Fellow and Trainee

- Selected as an NSF NRT FORW-RD trainee in an interdisciplinary program on robotic interfaces and assistants for future workplaces spanning robotics, mechanical engineering, computer science, materials, business, humanities, and social sciences.
- Connected doctoral research to virtual training, soft robotic teleoperation, compliant interaction, and robotic systems for high-skill physical tasks.
- Wrote broader-impact material for robotics and AI systems that operate near people, emphasizing workplace adoption, trust, training, and responsible deployment.
- Secured a \$1,000 grant supporting equipment, travel, and professional-development costs.

Worcester Polytechnic Institute, Worcester, MA

Aug 2023 – Dec 2023

Research Assistant – Cognitive Medical Technology Laboratory

- Fabricated and assembled low-cost open-source actuation hardware for concentric tube continuum robots, a miniaturized robot class for precise navigation in constrained spaces and minimally invasive surgery.
- Contributed to accessible CTR hardware with easy-to-source components, bills of materials, assembly instructions, and guided learning materials for early graduate students.
- Integrated actuation hardware, MATLAB forward kinematics, and optical-tracking experiments to validate end-effector displacement.
- Coordinated sourcing, fabrication, and assembly across WPI's Cognitive Medical Technology Lab, PracticePoint, and Innovation Studio for two complete CTR systems.

California State University, Long Beach, Long Beach, CA

Sept 2022 – Aug 2023

Research Assistant – Multiscale Mechanics of Materials Group

Advisor: Dr. Mortaza Saeidi-Javash

- Built a literature foundation for a flexible-electronics research program covering printed and conformal sensors, 2D nanomaterial inks, and wearable human-machine-interface devices.
- Synthesized fabrication approaches across inkjet, screen, aerosol-jet, extrusion, and direct-ink-write printing using graphene, MXene, MoS₂, thermoelectric, and piezoelectric material systems.
- Evaluated sensitivity, selectivity, response time, mechanical compliance, and durability of flexible physical, chemical, and biosensors for soft robotics, structural health monitoring, and wearable systems.
- Collaborated with graduate researchers on a direct-ink-write temperature sensor printed on a flexible PET substrate.

California State University, Long Beach, Long Beach, CA

April 2021 – July 2022

Graduate Researcher – Violin Acoustics and Structural Dynamics

Advisor: Dr. Allen Teagle-Hernandez

- Completed a master's thesis translating perceived violin quality into measurable vibroacoustic features, linking structural design, harmonic balance, frequency response, and performer/listener perception.
- Designed a controlled comparison of high- and low-cost modern violins, standardizing strings and fittings while documenting top plate, bridge, f-hole, bass bar, sound post, and tailpiece variables.
- Built a LabVIEW/NI data-acquisition workflow with PCB accelerometers, an array microphone, and an impulse modal hammer; collected 67-point top-plate maps and anechoic-chamber acoustic measurements.
- Linked FFT-derived violin response features to modal balance and perceived tone.

California State University, Maritime Academy, Vallejo, CA

Sept 2018 – May 2019

Undergraduate Researcher – Cross-Flow Tidal Turbine

Advisor: Dr. Tomas Oppenheim

- Conceptualized a Darrieus cross-flow tidal turbine, defined rotor geometry and build constraints, and selected 3D-printed blades with fiberglass coating as the manufacturing approach.

- Verified performance through water-tunnel power assessment and ANSYS structural analysis, evaluating blade and hub stresses under hydrodynamic loading and documenting operation around 25 rpm.
- Fabricated a full-scale prototype using additive manufacturing and sheet-metal forming informed by scaled water-tunnel experiments.

Publications and Research Outputs

- Pham, A. N., Rao, P., & Onal, C. D. (2026). Manuscript in prep.: *Reconfigurable Sarrus-linkage cells for multifunctional soft robots*.
- Pham, A. N. (2026). *Wavevis: inverse computational design environment for modular robotic surface mechanisms* [AI-assisted tool for target shapes, lattice topology, connector constraints, and linkage design].

(2025). *Quantifying the Effect of Non-Physical Parameters on the Nonlinear Dynamics of an Electromechanical Ratcheting Mechanism*. Accepted to IMAC, A Conference and Exposition on Structural Dynamics.
- Bonofiglio, K. (2023). *Making Concentric Tube Robots More Accessible: An Open-Source Platform with Easy-to-Source Components and Guided Learning Materials* [Master's thesis, Worcester Polytechnic Institute]. Research contributor to open-source CTR hardware assembly and validation support.
- Pham, A., & Teagle Hernandez, A. (2022). *Structural Properties and Perceived Acoustic Quality of Modern Violins* (Publication No. 29065875) [Master's thesis, California State University, Long Beach]. ProQuest Dissertations and Theses Global.

Professional Experience

Worcester Polytechnic Institute, Worcester, MA

Aug 2023 – Present

Teaching Assistant

- Developed learning activities for Stress Analysis, Statics, and Computer Aided Design with professors and teaching teams.
- Led weekly conference sessions and office hours for 90+ student groups, translating difficult engineering material into interactive problem-solving sessions.
- Designed hands-on learning sessions and guided students in connecting classroom mechanics concepts to physical models and engineering judgment.

NLS Lighting, Carson, CA

April 2022 – July 2023

Mechanical Engineer

- Led design-to-release luminaire product improvements across thermal testing, IP testing, FEA static simulation, fabrication, assembly, and installation support.
- Produced complete product design packages, including 2D drawings, bills of materials, engineering change orders, installation instructions, and application documentation.
- Collaborated with Washington, DC stakeholders to develop a retrofit kit for upgrading more than 75,000 street and alley lights to energy-efficient LEDs as part of a multi-million-dollar Smart Street Lighting project.

Hubbell, City of Industry, CA

May 2021 – Aug 2021

Mechanical Engineer Intern

- Managed fixture assembly and DLC V5.1 certification planning, reducing test cost and labor while accounting for SKU quantities and sales volume.
- Performed impact testing and FEA validation on luminaire assemblies, checking bracket, lens, and LED-PCB designs in Solid Edge.
- Supported launch of the Prevent vandal-resistant luminaire series through baseline testing, part sourcing, and assembly coordination with new product design teams.

Academy Inc., Montebello, CA

July 2019 – Aug 2020

Mechanical Design Engineer

- Implemented parametric product and pricing configurations, reducing design and quoting time.
- Engineered shade sails, awnings, and tensioned fabric structures for manufacturability and field installation.

- Managed projects from site measurements and material specifications through coordination and scope execution.

American Metal Bearing Company, Garden Grove, CA

May 2019 – June 2019

Mechanical Engineer Intern

- Optimized thrust, line-shaft, stern-tube, and strut bearing components using SolidWorks/Abaqus FEA, reducing material and labor cost.
- Coordinated manufacturing flow for line-shaft spherical bearings from rough casting through inspection, finishing, packaging, and shipment.
- Revised bearing-component drawings under Engineering Change Requests while maintaining GD&T standards.

Technical Skills

Mechanical design	SolidWorks, Onshape, PTC Creo, FEA review, GD&T-aware drawings, BOMs, ECOs, DFM, assembly planning, fixture design, prototype iteration.
Soft robotics	Pneumatic actuation, compliant mechanisms, continuum robots, modular soft robots, morphing surfaces, airflow routing, pneumatic surface prototypes, simulation-guided robotic prototyping.
Software	CUBIT, Sierra/SolidMechanics, ParaView, MATLAB, Simulink Simscape Multibody, Abaqus, Ansys FEA, Python, C/C++, ROS2, LabVIEW, Minitab, MS Office; AI-assisted design and web-tool prototyping.
Experiments	Modal testing, vibroacoustic measurement, FFT-based signal analysis, anechoic-chamber testing, optical tracking, pressure/force/displacement characterization, connector/airflow checks, design of experiments.
Hardware	3D printing, TPU/PETG/PLA prototyping, laser cutting, soldering, Arduino, Raspberry Pi, National Instruments DAQ, strain gages, thermocouples, pressure sensors, force testing (Mecmesin), hand tools.

Relevant Coursework

Soft Robotics; Advanced Dynamics; Ethics and Communication in Robotics and AI Research; Foundations in Robotics; Advanced Mechanics of Deformable Bodies; Mechatronic System Design; Design of Experiments; Engineering Vibrations; Automatic Feedback Control; Instrumentation and Measurement Systems.

Campus and Community Involvement

Member, American Society of Mechanical Engineers	March 2015 – Present
WPI Video Game Orchestra	Nov 2024 – Present
WPI Tennis Club	Aug 2024 – Present
WPI Philharmonic Orchestra, 1st Violinist	Nov 2023 – Present
CSULB Long Beach Lunabotics, Mechanical Engineer	Sept 2020 – May 2022
CSULB Beach Launch Team, Avionics Engineer	Sept 2020 – May 2022
CSULB Bob Cole Symphony Orchestra, 2nd Violinist	Sept 2019 – March 2020
Rebuilding Together Solano County, Volunteer	Aug 2015 – Aug 2016
